

Clare Pastula

Current: Victoria, BC V8N 0A1 | Permanent: Calgary, AB, T2Z 2C1 | ☎ 403.861.5058 | ✉ clarempastula@uvic.ca

Education

University of Victoria, Victoria, BC
Bachelor of Mechanical Engineering, 3rd year

September 2023 - Present
Graduation: August 2028

Competencies

Project & Construction Coordination: Design reviews & sign-offs, shift scheduling, LEM tracking, site planning

Construction & Project Software: Procore, Bluebeam Revu, WebGIS

Engineering & Technical: Materials Estimation, GIS Mapping, Site Planning, Circuit Schematics, 3D Printing

CAD & Design Software: SolidWorks, Autodesk Fusion

General Software & Programming: Microsoft Office, Google Workspace, UltiMaker Cura, Java, C

Documentation & Regulatory: Technical reports, workplans, management plans, program updates, permitting, contract amendments

Virtual Communication & Collaboration: Microsoft Teams, Slack, Zoom

Work Experience

Vancouver International Airport, Vancouver, BC

January- August 2025

YVR North Runway Modernization Project & Pump Station 8 Replacement

- Coordinated scheduling, design revisions, and site logistics to align consultant and contractor activities and maintain construction timelines
- Performed design reviews, quantity take-offs, and reviewed cost estimates to enhance technical accuracy and ensure compliance with green-tag safety requirements
- Evaluated field conditions to assess constructability, stockpile feasibility, and staging logistics, mitigating operational and safety risks
- Managed permit applications, contract amendments, and field reporting to ensure regulatory compliance and uninterrupted project delivery

Technical Projects

University of Victoria WEST x Fortis BC Biogas Plant Upgrades Collaboration

January 2026- Present

- Evaluated compressor efficiency and lifecycle cost scenarios to recommend optimal equipment selection for industrial fluid system applications
- Selected and sized mechanical components—including valves, relief devices, and suction/discharge piping—based on pressure, flow, and safety design criteria
- Modeled pressure and throughput conditions to validate system performance and inform development of a physical prototype

University of Victoria Microfluidics and Nanotechnology Research Lab

September 2023 - 2024

- Designed and fabricated a laboratory spin-coating device using CAD modeling and circuit integration to support laboratory research
- Applied Minimum Material Condition principles to optimize material usage, reducing manufacturing costs while maintaining structural performance
- Developed a detailed Bill of Materials to support accurate procurement and efficient assembly of mechanical and electrical components

Awards and Certifications

- Oviniv Student Scholarship Recipient (2022-2026)
- Electric Vehicle Technology & Service Short Course (2025)
- Valid Class 5 AB Driver's License
